E-mail: contentnet.hub@gmail.com

New International Security System – “Digital civilizism”:

- *Digital Social and Solidarity Economy (inalienable civic individual property, inclusive digital institutions and societal digital intelligence);*
 - *adaptation and resilience to climate change;*
 - *emergency transfer of crisis regions to international governance.*
-

Invitation to the Conference

To Universities

Participation in the deployment of a “digital institutional platform” for sustainable development and a viable future

Innovations that change social processes change the world. At the same time, social transformations and transitions cause anemia in a significant part of society. No wonder that in 2022 the most frequently searched phrase on the Internet was “Goblin mode”. This characterizes the emergence of powerful turbulence in human consciousness and social processes.

Digitalization opens up new opportunities and prospects for people, their education and development. However, the very transition period to a new society always carries many risks, vulnerabilities and threats associated with the lack of institutions and security systems. Such formation of new institutions has always been accompanied by increased turbulence and took significant periods of time in history. As a result, humanity has enjoyed only limited periods of stability and prosperity.

Today, the world has the technological, scientific and financial capabilities to shorten the period of formation of new institutions and new security systems and move to sustainable development and a more just society.

The new digital society poses urgent and impressive challenges for universities:

- determination of Nature as a priority factor of global security, including adaptation to climate change and preservation of the biopotential of the Planet;
- digital property is a new driver of development for economy, digital legal relations and security;
- Digital Social and Solidarity Economy: inclusive polycentric institutions as a factor of global security and sustainable development;
- Artificial Intelligence and systems of management and use of knowledge and information – transition to a digital economy, new legal institutions and new security systems;
- implementation of mechanisms of social development “not at the expense of each other, but for the benefit of each other” – the platform of the new inclusive security system.

The above prospects are being implemented within the framework of the creation of a new international organization – the **International Hub for Sustainable Development Project Management**, which provides for the deployment of a **digital institutional platform** for economic growth, sustainable development and a viable future.

Digital institutional platform will provide: a) new global and inclusive security system; b) new digital property; c) new Neuromorphic, event-driven and human oriented architecture for information business interaction (instead of today's data base-driven architecture, which has a fundamental problems with actualization, verification and exchange of information); d) auto formalization of business processes on the basis of digital intelligence.

We offer you to consider the possibility of your university's participation in this project.

The Conference program and terms of participation can be found at www.c3n.info.

Kind regards,

Conference Committee
